The **Foundation Asile des aveugles** is a unique environment providing a complete range of specialties in ophthalmology for diagnosis, treatment and care services for people of all ages, with the full spectrum of integrated services to support those with visual dysfunction.

Our missions encompass visual health promotion, treatment of eye diseases, support to the visually impaired, education and training in ophthalmology.

The **Jules Gonin Eye Hospital** plays host to world renowned clinicians and is an institute of higher learning. The hospital is the university department of ophthalmology of the Faculty of Biology and Medicine of the University of Lausanne.

Both our **nursing homes Clair-Soleil and Recordon** offer reassuring and suitably adapted settings for elderly people with visual impairment.

Within the laboratories of our **Visual Science Research Center** and in the clinic with our patients, our researchers are working determinedly to develop innovative therapies for our community.

**Rehabilitation Low vision**
The rehabilitation and low vision service supports visually impaired people and offers support and practical assistance in everyday life, enhancing their autonomy and quality of life.

**Education center for visually impaired students**
The center serves educational needs of visually impaired children and young people and helps them develop their own potential and integrate socially.

Thanks to generous donors, the foundation pursues the missions of its pioneers, perpetuating its commitment towards the vulnerable and in particular children, as well as conducting research in collaboration with institutions from around the world.
